

# SYNTEKO TINTING PRODUCT MIXED WITH NATURAL OIL

## | Tinting of NATURAL, DOMO and EXOTIC WOOD SEALER

**For tinting: TINTING PASTE**  
**Products: NATURAL, DOMO, EXOTIC WOOD SEALER**

It is easy to give your floor an individual look using Synteko TINTING PASTE together with Synteko floor oils and with EXOTIC WOOD SEALER. Tinted oil has the same properties as neutral product. Synteko TINTING PASTE should be mixed in a ratio of 1 tube (100ml) to 1 L of Synteko oil or sealer-oil. The mixing is easily done by adding the tinting paste to the oil and shaking the container thoroughly. Always use full tubes of Synteko TINTING PASTE. Be sure to completely empty the tube into the oil in order to avoid colour differences.

Synteko Tinting Paste can also be used in combination with Synteko EXOTIC WOOD SEALER. This combination gives you the opportunity to colour the finished floor. After sealing, the floor can be coated with Synteko's waterbased finishes.

For a contemporary decoration of wooden floors Synteko has introduced 7 modern tinting pastes:

RoseWood

Olive

Mahogany

Ebenholz

SteelBlue

Teak

WhiteWood
