

Welcome to Nash Timbers

NASH TIMBERS NEW PRODUCTS

LE MUR TONNELLERIE

Hurdford Hardwood have transferred French Oak barrels into a beautiful unique oak floor/wall lining. The mill has carefully deconstructed the wooden starves and re purpose the Oak highlighting the most interesting characteristics that are scattered amongst the wooden starve, from char marks to deep burgundy hues.

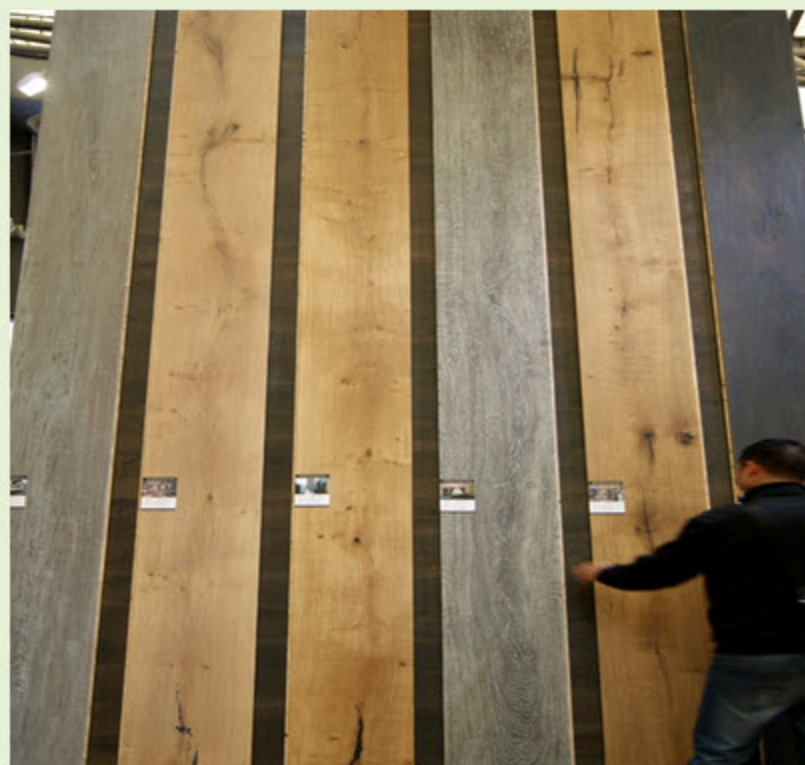

EUROPEAN OAK PRE-FINISHED ENGINEERED FLOORBOARD EXTRA LONG

4 METRE LONG FLOOR BOARDS

340mm x 22mm x 6mm

Vintage was the original 340mm wide oak board colour. However we now have raw stock so you'll be able to choose alternative colours from now on. You won't find many 340mm wide boards out in the market at the moment simply because not many factories are able to make it and stabilise a board at such width. The 340mm wide board is 4 metres long and 22mm thick. It simply looks stunning when you lay it in a big open space. This is the ultimate board. If you're looking for something rare, unique and something out of the ordinary in flooring, then you've found the right company. The mill has been making this board for 8 years now and many customers are in awe of the size of the board.

NASH TIMBERS SELECT SYSTEM APP

(can use on I pad, I phone, Mac or PC)

136 OLD SOUTH HEAD RD VAUCLUSE
NUMBERS LIMITED BOOK NOW**

This innovative and exciting announcement from Nash Timbers is the completion of their interactive Select System which is electronically accessible for I Pads and I Phones, and computers.

When choosing a timber floor, deck, stairs, posts, beams, cladding, lining board we find our clients don't know where to start. Let me guide you through the method of selecting a timber floor through Nash Timbers Select Program.

On finalising your timber selection you can then explore the sustainability, durability and hardness of the timber. Other timber applications such as stair material & external timber which includes decking, cladding & posts are outlined to assist you in choosing the correct timber for the correct use.

Also the interactive Select system program takes you through timber installation methods and finishes which allows you to have a complete holistic approach to specifying and selecting and using your timber knowledge sensibly and intelligently.
